

Tahoe Display Wall Setup Information and File Tips

Our Tahoe Display Wall System offers a unique, modern display at a competitive price. Your graphic is printed on stretch poly fabric in full color.

There are three sizes for the Tahoe Display, a 10 ft, 13 for and 20 ft. All use the same size main panel. The 13' adds a smaller side panel while the 20' adds a second main panel and the smaller panel.

Tips on creating files

For best results, avoid placing important graphics or text within 2" of the edge of the graphic. Since the graphic is printed on fabric, type should be at least 24 pt or larger to increase readability.

This unit requires onsite assembly. While not difficult, you should request and review the assembly sheet prior to ordering to ensure that you understand what will be required to assemble this unit.

Setup information:

All Tahoe Display Units - main panel

The main panel is 79.75" x 79.75".

Add 1" bleed on all sides for a document size of 81.75" x 81.75"

Main graphic
1" Bleed

The 20' unit adds a second main panel. See the next page for layout.

This unit features 2 large panels on the left and right side and a smaller center panel.

The main panels are 79.75" x 79.75".

The side panel is 35.25" wide" x 79.75" tall

Add 1" bleed on all sides for a document size of

Main panels: 81.75" x 81.75"

Center panel: 37.25" x 81.75"

SUPPORT FILES

Save your file as a press ready pdf for printing

We suggest sending a press ready pdf to print your order. Be sure to include crop marks and the required bleed. This avoids the need to send fonts and support files. If sending a native file, please include all image and graphic files.

Never use images that you found on a web page.

Web images may look great on the screen, but will not print like they appear. It is better to leave off a logo or photo altogether rather than paste one from a web page.

Never “up res” your image as this may cause undesired softness or blurring.

If you are ordering a large format poster or banner, be sure to use a high resolution graphic that will not lose quality when enlarged. Opening a graphic into Photoshop and increasing the size or dpi will typically result in a poor quality image when printed. Better yet, use a vector graphic that is designed for printing at any size. Remember, if it looks bad when small, it will look worse when printed large.

COLOR FORMAT

Convert all your graphics from RGB to CMYK

Your images may print off color or with inaccurate color if you neglect to convert images. Since your monitor is RGB, RGB images look great on screen, but they will look washed out and off color when printed on a CMYK printer or plotter.

Solid or spot colors should be Pantone (PMS) coated

Do not convert solid colors to CMYK as this can change their color value. We suggest referring to a current Pantone color to accurately choose and confirm your color. Never rely on your screen image for color.

A note about color accuracy

Our presses are calibrated to produce the most accurate color possible. Please do not use your own printer or monitor as a guide to color accuracy. Since we print using CMYK inks, spot colors may print differently than their PMS equivalent. If you are concerned about color accuracy, request and allow enough time to request a proof before printing your order.

HELPFUL INFORMATION

What is “Bleed”?

Bleed refers to extending your background so white space does not show.

Why do I need to add 8” to the top and bottom of my design?

We use this area to make pole pockets for the banner.

Please contact us if you have any questions. Thank you for your order!
